

# Instructions for Tinyjpg Tool

---

## **Introduction**

**Website Url :** <https://tinyjpg.com/>

### **Definition of a JPEG:**

A JPEG is a compressed image file format. JPEGs are not limited to a certain amount of colour. The JPEG is best for compressing photographic images.

### **What is Tinyjpg:**

Compress JPEG files with a perfect balance in quality and file size. It reduces that file size of your JPEG Images. This ensures your images are a respectable size for the web which stops slow loading of the image.

### **Why use it?**

Using this tool reduces images by about 80% and the difference to the eye is minimal, which makes it an excellent option for making images more efficient on a website.

## **Getting Started**

1. Open <https://tinyjpg.com/> in a new browser.
2. At the top of the webpage, click on the box "Drop your .jpg or .png files here!"
3. Select the image you would like to compress.
4. Click on Open.
5. Wait for image to upload and the word "finished" to appear.
6. Click "download" on the image you want to download.
7. Click on the downloaded image in the browser or go to the Downloads folder on your computer to open the image.
8. Rename the image to your liking and save the image in the folder you would like the image to appear in.
